

AI-POWERD OPERATIONS

Messaging became the front door

Operations never evolved

WHY NOW

How businesses operate today

Businesses run on **CHAOTIC MESSAGING**

WhatsApp, Instagram DMs, calls, and voice notes.

Orders arrive **UNSTRUCTURED AND INCOMPLETE**

Staff must manually confirm details.

Each message triggers **REAL WORLD TASKS**

Inventory checks, payments, dispatch, delivery.

Operations live across **PEOPLE, CHATS, AND SPREADSHEETS.**

As demand grows, businesses must
SCALE OPERATIONS BEFORE REVENUE.

Why Existing Tools Fail

CHATBOTS

Respond to messages

Cannot run real operational workflows

CRMs

Store orders and customer data

Do not make decisions or coordinate tasks

DELIVERY PLATFORMS

Handle logistics only

Not aware of business rules, approvals, or operations

They manage communication or data **NOT EXECUTION.**

THE SOLUTION

Engages the Customer

AI assistant chats with the user, proposes products, and confirms order details.

Runs Business Workflows

Applies each company's rules, approvals, and operational logic.

Understands Requests

Converts messages from WhatsApp, Instagram, calls, and web into structured orders.

Verifies Completion

Requires proof: photos, timestamps, and delivery confirmation.

Coordinates Execution

Dispatches tasks to staff, drivers, and systems in real time.

Improves Over Time

Learns from execution data to optimize future operations.

CUSTOMER SEES

How It Works

Order Intake

(WhatsApp / Telegram, Website)

AI assistant chats with the customer, suggests products, and processes the order. A human operator can take over the conversation at any moment.

Order Processing

Orders appear in the operations dashboard where staff can:

- Track Status
- Receive Whatsapp/Telegram Alerts
- Mark Completion
- Send Proof (photo confirmation)

Review Request

After delivery, the system automatically sends a review message to the customer (5–10 minutes later).

Business Database

Each business has its own configurable database storing:

- Order Details
- Required Actions
- Status
- Delivery Information

Delivery Dispatch & Tracking

Drivers receive delivery notifications via WhatsApp/Telegram. They can view active jobs and update delivery status.

Real Demand

INDUSTRY-AGNOSTIC BY DESIGN

Food & quick commerce

Flowers (FLOR fits nearly 1:1)

On-demand services

Delivery-first and logistics-native Brands

Auto detailing & mobile services

Home services & maintenance

Bookings & scheduled experiences

COMMITMENTS FROM

FLOR
dubai

TWO

THREE

FOUR

Scale & Business Model

Initial Markets

Food & Quick Commerce

High order volume

Tight SLAs, substitutions, refunds

Operations already driven by messages & calls

Flowers & Gifting

Quality-sensitive, emotional outcomes

Delivery precision matters

Proof (photos, confirmation)
immediately reduces disputes

On-Demand & Home Services

Scheduling + dispatch complexity

Human execution with checklists

Clear need for proof and auditability

One System Many Markets

All markets share the same core anatomy

Unstructured demand (messages, calls, forms)

Human fulfillment

Costly failures if execution breaks

Execution, Enforced

Deterministic execution, not best-effort workflows

Completion enforced by proof, not trust

Every decision auditable, end-to-end

Businesses defined by configuration, not custom code

Same core. New markets unlocked by configuration.

Embedded Expansion

Land with one workflow

Expand across operations

Automation increases over time

Compounding Value

Execution history

Proven workflows

SLA & evidence logic

The platform becomes their operational backbone.
